

# Modtec's CAF Tac-Pac

The Modtec CAF (Compressed Air Foam) "Tac-Pac" is a lightweight means of providing highly stable foam at variable expansion rates for decon operations. This unit can draw decontaminants and even fresh water from virtually any container including drums. Weighting only 15 lbs., the unit is housed in a corrosion resistant durable plastic case with stainless steel standoff and control panel. Rapidly deployable, the unit will throw foam up to 30' in distance, up to 20' vertically with a maximum flow of 26.5 liters/min. Unit dimensions: 7' x 10" x 11", 15 lbs..

## OPERATIONAL FEATURES:

1. Will operate on any compressed air source including SCBA's.
2. Suction and output lines connect easy to marked ports.
3. 8' Delivery hose with trigger smooth bore attachment delivers foam long distances.
4. Fan tip can be easily added.
5. Will draw from virtually any source.
6. Adjustable foam expansion provides greater capability.
7. Includes integral regulator

MDF-200 is recommended to be applied at an expansion rate of 8:1 and at a rate of 1 liter of liquid per 2 sq. meters of contaminated surface based upon NATO assumptions of 10 grams of agent per sq. meter. See MDF-200 Operational guide for more information.
