

DS Decon Detergent Pro

Decontamination Powder

DS Decon Detergent Pro Patented Decontaminant Powder

USE: DS Decon Detergent Pro has been developed to chemically neutralize the residual effects of contamination and odors in clothing and other materials. The patented technology cleaves the molecular structure of chemicals and odors as opposed to masking the smells through perfumes or other means. Can be used in cold water laundry applications and with colors. More effective than chlorine but without the bleaching effect. Highly effective in laundry applications to remove contamination.

TECHNOLOGY DEVELOPMENT: In response to a national initiative, Sandia National Laboratories under the Department of Energy, patented the Sandia Decon Formulation pursuant to US Patent No. 6,566,574 B1. The Modec Decon Formulation ("MDF") Series of products are produced by Modec, Inc. under its license 00-C00872 with Sandia Corp. DS Detergent is non-toxic and environmentally safe for the effective treatment of contaminated clothing and other materials. Produced under the additional US Patents 5,663,132 and 5,789,361.

DS Decon Detergent Pro Patented Decontaminant Powder

PRODUCT DESCRIPTION: A safe, non-toxic neutralizing product specially designed to remediate the effects of contamination in clothing and other contaminated contents and materials. It is non-flammable, biodegradable and does not contain alcohol-based ingredients. This patented dry powder media contains unique elements that provide for oxidation and hydrolysis of the elements typically associated with contamination and odors. For complete information about this product see www.deconsolutions.com.

CONTAINS: DS Decon Detergent Dry Powder.

KEEP OUT OF EYES: Do not ingest. Avoid contact with mucus membranes. Flush eyes thoroughly. Keep out of the reach of children.

DIRECTIONS:
Use one cup per standard laundry load.
