

MDF-120

Antiseptic Skin Decon Kit

PATENTED SKIN DECON KIT: For topical application to the skin to prevent infection and to help prevent cross contamination. MDF-120 is the first non-toxic first-aid antiseptic specifically designed as a topical decontaminant for the skin. It reduces the transmission of pathogenic microorganisms to patients and personnel.

TECHNOLOGY DEVELOPMENT: In response to the national initiative to combat terrorist threats, Sandia National Laboratories (SNL) under the Department of Energy patented the Sandia Decon Formulation for the mitigation of warfare agents (US Patent No. 6,566,574 B1). Modec, Inc. produces the Modec Decon Formulation Series ("MDF") under its license with Sandia. MDF-120 is a safe and effective means for a decontamination wash of the skin that reduces the risk of cross contamination and transmission of pathogenic organisms.

PRODUCT DESCRIPTION: A proprietary and patented aqueous-based media containing emollients and moisturizers to protect the skin. Established as safe and effective with germicidal effect, it incorporates a unique species of oxidants that enhances the physical action of hydrophilic solubilization of materials that are sparingly soluble. It is non-flammable, biodegradable and does not contain alcohol-based sanitizers. Available in individual sized packets, 22 ounce spray bottles, 2 and 5 gallon sets.
