## **DS PREDECON PRO** **Fungistatic Treatment Formula**

Utilizing patented technology developed by the United States Department of Energy, Modec, Inc. has developed a unique formulation that acts as a preservative to protect treated articles from microbial deterioration. Modec's "PreCon" is a non-toxic formulation based upon the technology licensed by Modec from Sandia National Laboratories.

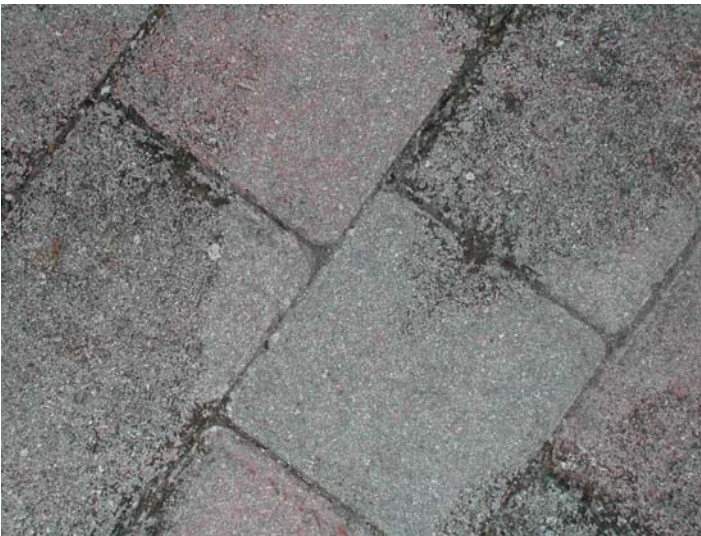

- Fungistatic agent protects articles from fungal and mildew growth
- Will resist deterioration by mold fungus
- Produces a coating that resists degradation from microorganisms
- Economical, safe and non-toxic to apply
- Complies with EPA 40 CFR 152.25(a)
- Long lasting effect even in humid areas
- Incorporates a desiccant that repels moisture

Modec's Decon Formula (MDF) is Commercially Manufactured using the Formula Licensed by

 Sandia National Laboratories

**Surfaces treated with Modec's PreCon prevent mold damage for an extended period of time. Treated surfaces resist mold and mildew even in the presence of visible mold. (Photo of treated lumber previously damaged by mold)**

**Even treated porous exterior surfaces such as brick display resistance to mold and mildew after one-full year. (Photo of brick is located in an exterior patio of a residence in Florida continually exposed to the elements.)**

**Modec's PreCon formula has shown resistance to deterioration that can result from mold fungus and mildew. The fungistatic agents incorporated in the formula inhibit the growth of microorganisms on porous and non-porous surfaces. (Photo of painted exterior patio ceiling tile)**
